

Numerical Algorithms

Volume 55 · Numbers 2–3 · November 2010

Special Issue: Second Dolomites Workshop on Constructive Approximation and Applications
Guest Editors: J.M. Carnicer · S. De Marchi · M. Redivo-Zaglia · E. Venturino · M. Vianello

Preface 141

ORIGINAL PAPERS

Numerical integration schemes for space–time hypersingular integrals in energetic Galerkin BEM
A. Aimi · M. Diligenti · C. Guardasoni 145

Nonlinear data-bounded polynomial approximations and their applications in ENO methods
M. Berzins 171

Complete orthonormal sets of polynomial solutions of the Riesz and Moisil-Teodorescu systems in \mathbb{R}^3
I. Cação 191

Newton methods for a class of nonlinear hypersingular integral equations
M.R. Capobianco · G. Criscuolo · P. Junghanns 205

Weighted interpolation for equidistant nodes
J.M. Carnicer 223

A practical error formula for multivariate rational interpolation and approximation
A. Cuyt · X. Yang 233

Orthogonal polynomials in several variables for measures with mass points
A.M. Delgado · L. Fernández · T.E. Pérez · M.A. Piñar · Y. Xu 245

Gauss quadrature routines for two classes of logarithmic weight functions
W. Gautschi 265

Discrete Fourier analysis with lattices on planar domains
H. Li · J. Sun · Y. Xu 279

Finite element solution of a linear mixed-type functional differential equation
P.M. Lima · M.F. Teodoro · N.J. Ford · P.M. Lumb 301

Dynamical systems and numerical analysis: the study of measures generated by uncountable I.F.S.
G. Mantica 321

Finite difference solution of a singular boundary value problem for the p -Laplace operator
M.L. Morgado · P.M. Lima 337

Spectral element methods on unstructured meshes: which interpolation points?
R. Pasquetti · F. Rapetti 349

On truncation errors of some generalized Shannon sampling operators
G. Tamberg 367

A method to compute recurrence relation coefficients for bivariate orthogonal polynomials by unitary matrix transformations
M. Van Barel · A. Chesnokov 383
