Contents

Introduction **iv**

1 The Musiela model **1**

1.1 Presentation of the Musiela model . . . 1
1.2 Formulation of the problem . . . 3
1.3 Preliminaries about Langevin equations in Hilbert spaces . . . 4
1.4 The space H^1_γ . . . 6
1.5 The space H^1 . . . 7

2 The interest rates **8**

2.1 The Musiela model in the Gaussian case . . . 8
2.2 From the Musiela model to the Vasicek model . . . 8
2.3 From the Musiela model to a state variables model . . . 9
2.4 Considerations on the Hilbert space H . . . 11
2.5 Structuring the Musiela model with respect to state variables . . . 11
2.5.1 The Vasicek model . . . 11
2.5.2 The general state variables model . . . 12
2.6 Approximating the Musiela model with state variables . . . 12
2.7 Open problems . . . 14

3 Calibrating the model **16**

3.1 An "implied" approach . . . 16
3.2 Two "historical" approaches . . . 18
3.2.1 With less datas . . . 19
3.2.2 With more datas . . . 19
3.3 Karhunen–Loeve expansion . . . 20
3.3.1 The representation problem . . . 20
3.3.2 The "finite energy" case: Karhunen–Loeve expansion . . . 21
3.3.3 Calculation of the eigenvalues of R . . . 21
3.3.4 Rate of convergence of the series . . . 21
3.3.5 Application: the Musiela model . . . 22

4 Robustness of the Musiela model **24**
4.1 A functional differential equation for interest rates derivatives 24
4.2 Robustness of the Musiela model 26
4.3 Sensibility of the model 30
4.4 Open problems 31

A Positivity of rates **32**
A.1 The Vasicek model 32
A.2 The d-dimensional Gaussian model 37
A.3 Open problems 39
